

## Acuity LED 1600 II: Overview

The latest generation of this successful LED UV hybrid printer is now **even faster and more versatile**, with simultaneous colour, white and clear ink printing. Powered by Fujifilm's leading printhead and ink technologies, this is a reliable production machine **built to deliver exceptional results**.

### Key features

- ▶ Low energy consumption, long life LED lamps (up to 10,000 hours)
- ▶ Fujifilm Dimatix Q class industrial printheads
- ▶ Excellent productivity up to 33m<sup>2</sup> per hour
- ▶ Excellent ink coverage with strong, vibrant colours
- ▶ Uvijet LL eight colour ink set to meet a broad range of application needs
- ▶ Simultaneous multi-layer printing with colours, white and clear
- ▶ Print roll media and rigid sheets

### Cost-effective LED UV technology

Acuity LED 1600 II is built to produce exceptional print results in the most environmentally friendly way, with low energy LED UV curing technology. LED lamps consume far less energy than conventional UV and last up to ten times longer so have a positive impact on the total cost of ownership.

### Robust build, reliable production

Acuity LED printers are built for continuous printing and some owners even run them 24/7. Fujifilm Dimatix printheads are both precise, fast, and have a track record of long life in print production.

### Wide application range

Produce a wide range of applications on roll and rigid materials, including display graphics, signage, decals, environmental graphics and package prototypes. LEDs produce very little heat, which means they can work with heat-sensitive media without deformation. High impact Acuity LED prints can be used with specialist finishing processes to create durable architectural graphics.

### Added value, creative printing

Simultaneous two or three-layer printing with colour, white and clear inks provides the ability to produce high value creative prints that can expand your service offer.

## Designed for creativity

### Near photographic quality images

Achieve smooth tones and outstanding close-up clarity thanks to light inks, variable drop printheads and dot gain control. VersaDrop™ multi-pulse jetting delivers droplets of different sizes according to the definition needed by the image to produce smooth changes in tone.

### Print on a wide range of materials

Uvijet inks offer excellent adhesion to a wide range of standard display materials and interesting materials like textured boards, coloured media, mirror board, wood and aluminium composite.

### Vibrant colours

Uvijet ink systems are renowned in the industry through Fujifilm's high-productivity wide format printers. Fujifilm's Micro-V ultrafine dispersion production technology produces high pigmentation for strong, vibrant images and a wide colour gamut.

### 8 colour Uvijet ink set

Includes CMYK, light cyan, light magenta, white and clear inks as standard. Light inks enhance colour reproduction, producing smooth tonal images like skin tones, vignettes and lighter solid colours.

### Clear and white ink

Clear ink offers the luxury to highlight or enhance print with high-gloss spot finishes. High density white ink can be used to produce creative effects on clear and coloured media. Colours, white and clear inks can be printed simultaneously.

### Colour-white-colour layer printing

Print colour-white-colour layers in one pass for two-sided images on transparent materials.

### Print on thin films

LEDs produce very little heat, which means they can work with heat-sensitive media.

### Spot-colour matching software

Get the colour spot on for every media. Match any colour in minutes with Fujifilm's simple-to-use software.

## Driven by Fujifilm technology

### LED UV technology

LED UV lamps use a fraction of the energy of conventional curing systems, produce no wasted heat and are safe to work with.

### Fujifilm print system technology

The inks, printheads and LED curing system are Fujifilm technologies. They are accurately tuned to deliver brilliant images at speed.

### Fujifilm Dimatix printheads

Uses eight Q-class printheads. These high frequency heads are both precise, fast, and have a track record of long life in high performance production.

### Easy installation

As there is no wasted heat, VOCs or ozone, the printer can be installed in any production environment without dedicated extraction.

### Prints are immediately dry

LED UV cures the ink instantly so there is no need to wait for the print to dry before finishing or shipping.

### Print mode options

A range of print modes are available to provide different levels of quality and speed, depending on the specific job requirements. The fastest print mode offers up to 33m<sup>2</sup>/hr.

### Fast startup

LED UV requires no lamp warm-up time, so printing can start immediately.

### Quick switch between roll and rigid printing

Flatbed feed and receive tables are used for printing rigid media. Fitting takes just a couple of minutes.

### Reusable cartridge system

The disposable foil ink pouch is contained by a reusable plastic ink cartridge holder, reducing waste.

### Low maintenance

LED UV inkjet requires minimal daily maintenance.
